

## Retrofit Kit Post Top

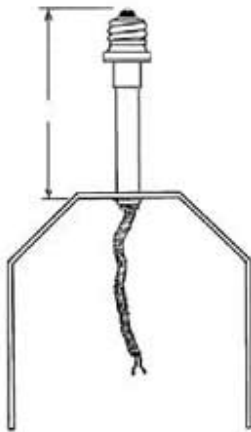

There are two ways to retrofit a post top fixture. If there is a glass refractor inside the existing fixture, you can choose to leave it and simply install our LED Kit onto the refractor. If you desire to be dark sky compliant, then choose our Patented Yoke Bracket to position the LED source on top of the inside of the fixture facing downwards towards the street.

Dark Sky

Borosilicate glass refractors

Yoke Mount for dark Sky Set Up

Kit installed onto existing refractor

1. In both scenarios, replace the existing ballast.
2. For the dark sky installation, simply remove the existing lamp and install the yoke into the socket and position the LED to the top of the fixture facing down. Finished
3. For the internal glass refractor retrofit, install the internal reflector included in the kit into the bottom of the refractor and secure the LED to the top of the refractor with GE clear silicone. Finished
